

# 6 Ways Better IT Helps To Grow Your Business

No matter how big or small your company: IT should expand with you into the future. Find out 6 ways how cloud-managed IT helps to grow your business.

## 1. Deploy quicker

Cloud-managed IT platforms allow remote management of your infrastructure from any browser at any time. With the ability to pre-configure devices before they're even delivered and plugged in, IT administrators can install and configure hardware in no time.

## 2. Save resources

Cloud-managed networks are simple to manage with minimal training required. That's ideal for organisations with limited IT staff and can lead to cost savings of up to 90% compared to traditional network infrastructures.

Over **25%** of IT decision makers in the UK define saving costs as the number one priority for their infrastructure.

## 3. Gain full visibility

The management interface in the cloud allows IT administrators to see how their networks are performing and make configuration changes across any number of networks instantly. Automated alerts let you know about network irregularities which can be troubleshooted remotely within seconds.

## 4. Protect your network

With cloud-managed IT, security settings are simple to synchronise across thousands of sites using templates. Auto VPN technology securely connects branches in a few clicks and brings the control back to where it belongs: your IT team.

Over **33%** of IT decision makers state that security worries them the most about their current infrastructure.

## 5. Automate updates

Cloud-managed IT gets even better over time. The cloud-based architecture allows devices to automatically download and install firmware updates with new features and security fixes. That ensures that your network is always up-to-date without additional investment.

## 6. Digitalise for the future

Digitising tools and processes, as well as creating new ones is essential to continuous growth. Intelligent Cloud platforms come with analytical tools that provide extra business insights. Limitless scalability enables companies to grow their network effortlessly and gives organisations the foundation they need to embark on a transformational digitalisation journey.

*"It's secure and we have a complete view of what's going on. Today, it's the only platform that allows you to manage your entire infrastructure from one place."*

Luke Braham, IT Manager at RED (Uk based staffing firm)
